Does your facility have a need to receive electronic prescriptions from outside the VA?

Have you ever wondered why VA can’t receive electronic prescriptions (Inbound eRx) from outside of VistA? The VA has been working on that problem and will be releasing inbound eRx version 2.0 in the fall of 2017.

The inbound eRx project will address the longstanding need of the VA to receive and process prescriptions from external providers. The new system will connect to an outside exchange using the Change Healthcare (formulary Emdeon) system, and use the NCPDP 10.6 SCRIPT standard.

Receiving of inbound eRx’s will help support CHOICE patients, increase efficiency, and improve patient satisfaction. Also an expanding list of states are no longer allowing paper prescriptions to be used.

The system will be limited in its first release, and will not include the ability to accept controlled substance prescriptions, and will not have the ability to request refills (renewals in VA) from outside providers. But it is hoped that version 3.0 of inbound eRx will address these issues in 2018.

For more information please attend next PBM Showcase Inbound eRX!
